Definitions:

1. **Median:** The value of the middle observation in an order set of data.
2. **Sample standard deviation, s :** The positive square root of the sample variance.
3. **Sample variance, s^2 :** The average of the squared deviations of the data values from the sample mean.
4. **z-score:** A z-score measures the number of standard deviations that a data value is from the mean.
5. **Sample range:** The difference between the max and min observations in the sample.
6. **Empirical Rule:** About 68% of all observations are within one standard deviation of the mean.
About 95% of all observations are within two standard deviations of the mean.
Almost 99% of the observations are within three standard deviations of the mean.
7. **Relative frequency** of an example is the number of times an observation falls into that classification as a portion of the total number of observations.
8. A **histogram** is similar to a bar chart, but since numbers are naturally ordered, the x-axis of the graph must be scaled to reflect that.
